CAREER OBJECTIVE

B.E. Computer Science undergraduate with proven **problem-solving** ability across **800+ competitive programming** problems and hands-on experience in **Core Java, Spring Boot**, and **C++ systems** programming. Seeking a **Software Engineering** Intern role to deliver clean, efficient, and **scalable** software in a product-driven environment

EDUCATION

Chandigarh University, Punjab, India

Sep 2023 – July 2027

B.E. Computer Science (AI ML, Hons)

Shivalik Public School, Punjab, India

2023

CBSE, Class XII (PCM)

Percentage: 84%

Holy Family Convent School, Punjab, India

2021

ICSE, Class X

Percentage: 93.1%

TECHNICAL SKILLS

Programming Languages: Java, SQL, C++, React.js, Python

Product & Analytics Tools: Google Analytics, Google Colab, Postman, Figma, Excel, Microsoft365

Frameworks & Technologies: Spring boot, Django, jQuery, NoSql, Hibernate, Kafka, Git, Generative AI, Agentic AI

Cloud & DevOps: AWS (EC2, S3), GitHub Actions , Azure fundamentals , Docker, Kubernetes

PROJECTS

Campus Crush — [Link](#)

Jan 2026 – Feb 2026

React.js, Spring Boot, RESTful APIs

- Engineered a secure, **anonymous messaging platform** utilizing college-issued UUIDs to verify originality
- Developed a robust authentication pipeline using an **OTP-based** verification system, reducing fraudulent account creation by **90%**.
- Integrated **real-time communication** features to facilitate seamless, low-latency chat experiences between anonymous participants.

Smartly Tasks — [Link](#)

Sept 2025 – Dec 2025

Spring Boot, Spring Security, RESTful APIs

- Developed a scalable task management web application using **Core Java** and **Spring Boot**, applying **OOP** principles, **exception handling**, and **RESTful API** design for clean, maintainable backend architecture
- Implemented **CRUD** operations for efficient task creation, updating, and deletion

Asynchronous Task Scheduler Parallel Image Processor — [Link](#)

Sep 2025

C++ 17 — Multithreading

- Built a task scheduler using **synchronization primitives** (mutex, condition variable) to optimize multi-core CPU utilization
- Engineered a automated pipeline for bulk image filtering, achieving a **3.8x speedup** on Apple M4 architecture

User Interface Designs -

Mar 2023 – Oct 2023

Figma, Framer

- Created a high-fidelity motion graphic ad showcasing Nike's branding through **engaging animation** , **typography**, and **color psychology** to maximize visual impact.
- Collaborated on product roadmap execution by designing a **user-centric** mobile interface with navigation and real-time booking workflows thereby increasing task efficiency by 20%.
- Enhanced a modern and secure **design** and **prototype** for banking applications, ensuring consistent cross-platform experience and tested with 5 users to validate **usability** and **consistency**

ACHIEVEMENTS & LEADERSHIP

- Solved **800+ algorithmic problems** (LeetCode , Codeforces).
- Achieved a **Codeforces rating 1350+**, reflecting consistent performance in rated competitive programming contests.
- Attained a **LeetCode rating** of **1567**, ranking among the top participants on the platform.
- Earned an **AtCoder rating** of **540+**, actively participating in structured algorithmic contests.
- Participated in **60+** coding contests, showcasing analytical and problem-solving skills under the given time constraints.
